Third party notices

Open Factory Studio is under the GNU General Public License v3.0 (see LICENSE). It uses these parts made by other people, each under its own license. The ones marked "only for building and testing" or "only for tools" are used to build or test the program and don't come with it.

Part	Version	License	What it does
Qt	6.8	LGPL-3.0 / GPL-3.0	The program's windows and widgets (linked dynamically)
Lua	5.4	MIT	Scripts, presets and templates
sol2	3.5.0	MIT	Connects Lua to the C++ code
LodePNG	20261001 (commit ff206aa)	zlib	Reads and writes PNG files. Copied unchanged into third_party/lodepng
Catch2	3.16.0	BSL-1.0	Unit tests (only for building and testing)

These were used to learn how the file formats and the engine work. No code was copied from them unless it's in the table above.

- Elecbyte's M.U.G.E.N documentation (the file formats and the language).
- IKEMEN GO (MIT), to see how M.U.G.E.N behaves, including how SFF sprites and SND sounds are read (src/image.go, src/sound.go). Our formats library was written separately.

Qt

Qt is under the GNU Lesser General Public License version 3 and the GNU General Public License version 3. Open Factory Studio links Qt dynamically, so the Qt libraries that come with the downloads can be swapped for other builds that work with it. Qt's source code is at https://download.qt.io/ and https://code.qt.io/.
