Changelog

What changed in each version.

Not released yet

Added

- Project setup: CMake build with presets for Windows (llvm-mingw, MSVC), Linux and macOS.
- The core library (ofscore), the file formats library (ofsformats), the shared Lua library (ofslua) and the M.U.G.E.N engine plugin.
- Engine plugins are found and loaded, with a version check.
- Unit and GUI tests (Catch2, QtTest) and automatic builds.
- Settings files (config.xml, shortcuts.xml, history.xml) with defaults and user changes.
- All the actions of the program and the M.U.G.E.N editors, with shortcuts for each editor and menu items that show their keys.
- Lua presets for the interface (Classic, Clean, Neo, Ultimate) that build the toolbars and editor panels.
- Main window: menus, Main and Extra toolbars, project tabs, the welcome page with recent projects, left and right panels, file tabs, bottom panels and the status bar. M.U.G.E.N projects of every type open.
- M.U.G.E.N language data for the code editors: the syntax database (every file type, state controller and trigger from the DOS versions to 1.1), completion lists, snippets, state controller templates, PalFX presets and reference pages for controllers and triggers, with a checker and tests on real files.
