Changelog

What changed in each version.

Not released yet

Added

- Project setup: CMake build with presets for Windows (llvm-mingw, MSVC), Linux and macOS.
- The core library (ofscore), the file formats library (ofsformats), the shared Lua library (ofslua) and the M.U.G.E.N engine plugin.
- Engine plugins are found and loaded, with a version check.
- Unit and GUI tests (Catch2, QtTest) and automatic builds.
- Settings files (config.xml, shortcuts.xml, history.xml) with defaults and user changes.
- All the actions of the program and the M.U.G.E.N editors, with shortcuts for each editor and menu items that show their keys.
- Lua presets for the interface (Classic, Clean, Neo, Ultimate) that build the toolbars and editor panels.
- Main window: menus, Main and Extra toolbars, project tabs, the welcome page with recent projects, left and right panels, file tabs, bottom panels and the status bar. M.U.G.E.N projects of every type open.
- Options dialog (General, Interface with the keyboard shortcut editor, Messages, Colors, Graphics, Code and the M.U.G.E.N tab), About dialog, Calculator and Clipboard container. Settings can be exported to one file, settings from an older install can be imported, and default settings come with the program.
- Themes: the Dark (default), Light, Classic and Ultimate interface styles, the six color sets, and the Nuvola, Flat-Dark, Flat-Light, Classic and Ultimate icon sets with their M.U.G.E.N extras, made from openly licensed icons by tools/iconsets/build_iconsets.py.
