Changelog

What changed in each version.

Not released yet

Added

- Project setup: CMake build with presets for Windows (llvm-mingw, MSVC), Linux and macOS.
- The core library (ofscore), the file formats library (ofsformats), the shared Lua library (ofslua) and the M.U.G.E.N engine plugin.
- Engine plugins are found and loaded, with a version check.
- Unit and GUI tests (Catch2, QtTest) and automatic builds.
- Settings files (config.xml, shortcuts.xml, history.xml) with defaults and user changes.
- All the actions of the program and the M.U.G.E.N editors, with shortcuts for each editor and menu items that show their keys.
- Lua presets for the interface (Classic, Clean, Neo, Ultimate) that build the toolbars and editor panels.
- Main window: menus, Main and Extra toolbars, project tabs, the welcome page with recent projects, left and right panels, file tabs, bottom panels and the status bar. M.U.G.E.N projects of every type open.
